

# SAIMUN 2025

## Resolution #430

EXPORTED 15TH DECEMBER 2025 23:11  
POWERED BY MODEL UNITED NATIONS CONFERENCE MANAGER

**FORUM:** Ecology and Environment

**QUESTION OF:** International Cooperation in Developing Renewable Energy Sources

**SUBMITTED BY:** Republic of Korea

**CO-SUBMITTED BY:** Australia, Chile, Guyana, Iran, Lebanon, Poland, Syria

THE ECOLOGY AND ENVIRONMENT COMMITTEE,

*Acknowledging* the Paris Agreement commitment to reducing global greenhouse gas emissions and the role that renewable energy sources play in mitigating climate change,

*Deeply concerned* about the economic and environmental disparities in renewable energy development, particularly in low income and climate vulnerable nations, which hinder their ability to transition to sustainable energy sources,

*Emphasizing* the importance of technology transfer and capacity building between developed and developing nations to ensure equitable access to renewable energy advancements,

*Recognizing* the vital role of education in promoting sustainability and ensuring that current and future generations are equipped with the knowledge and skills to support the transition to renewable energy,

*Further recognizing* the disparities and opportunities for the harvesting of renewable energy depending on individual countries climate,

1. **Encourages** developed nations to share renewable energy technology, expertise, and research with developing countries to ensure a fair transition to clean energy;
2. **Calls for** the establishment of an International Renewable Energy Fund (IREF) to provide financial assistance and grants to nations struggling to implement renewable energy projects;
3. **Recommends** the creation of a Global Green Energy Network under the United Nations to facilitate partnerships between governments, private sector companies, and research institutions to accelerate innovation in renewable energy;
4. **Urges** member states to reduce tariffs and trade barriers on renewable energy technologies, allowing for

easier international exchange of solar panels, wind turbines, and other clean energy infrastructure;

5. **Proposes** that nations collaborate in large-scale international renewable energy projects, such as cross-border solar farms and offshore wind farms, particularly in regions with abundant natural resources;

6. **Encourages** the transfer of renewable energy knowledge through international training programs, workshops, and educational initiatives to help nations build local expertise in clean energy;

7. **Calls upon** financial institutions such as the World Bank and International Monetary Fund (IMF) to provide low-interest loans to developing countries for renewable energy infrastructure;

8. **Supports** the expansion of the United Nations Framework Convention on Climate Change (UNFCCC) Clean Development Mechanism (CDM) to incentivize businesses and governments to invest in clean energy projects globally;

9. **Recommends** the creation of an International Renewable Energy Monitoring System to track global progress, promote transparency, and assess the impact of cooperative energy initiatives;

10. **Encourages** governments to set binding renewable energy targets in line with the Paris Agreement and Sustainable Development Goals (SDGs), ensuring international accountability and progress.
